

Help Shape Fairer Maternity Care!

Patient and Public Involvement in Research: Bias in Medical Devices

What the Study is About

We want to understand how medical tools and devices used in pregnancy and newborn care work for different groups of people. Sometimes these devices don't work equally well or aren't offered fairly. Your input will help us ensure healthcare is safer, fairer, and more inclusive for all mothers and babies.

Who We Are

We are researchers at the University of Oxford, working with doctors, technology experts, and community groups to improve policies and training. We want to hear from people who have been pregnant, parents, and families about their real experiences.

What you'll do

As a public contributor you will:

- Share your views and experiences of pregnancy care and medical devices
- Join discussions to highlight concerns and suggest improvements
- Help shape recommendations to make healthcare fairer

Who we are looking for

Parents, families, or anyone recently pregnant, especially from different ethnic and socio-economic backgrounds.

What we offer

- £25 per hour for your time (8 online meetings across two years, plus prep)
- Childcare costs covered if agreed in advance
- Support and materials provided so you feel confident to take part

Interested?

Email us and we'll share more information
